Design

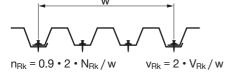

Design shear and tension resistance

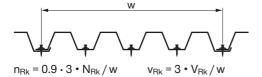

$$V_{Rd} = V_{Rk} / \gamma_M$$
 $N_{Rd} = \alpha_{cycl} \ N_{Rk} / \gamma_{M \ with} \ \alpha_{cycl} = 1.0$ for all sheeting thickness t_l α_{cycl} considers the effect of repeated wind loads

 $Y_M = 1.25$ in the absence of national regulations

Characteristic tension resistances n_{Rk} [kN/m] and shear resistances v_{Rk} [kN/m] per unit length, taking the effect of thermal constraints into account

 N_{Rk} and V_{Rk} characteristic shear and tension resistance w ... width of the panel sheet

For a, b, c, d please refer to Application requirements, Sheet thicknesses and overlap types

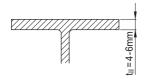

The same characteristic resistances can also be applied along supports at end-overlaps, if connection type "d" is not covered in the load table.

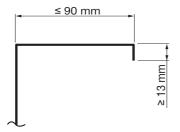

Application recommendation

Thickness of base material

 $t_{II} = 4.0 - 6.0$ mm for general shapes

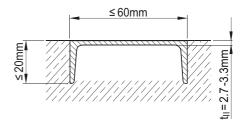

Fastening to cold-formed C- and Z-sections with a thickness from 2.9 to 4.0 mm

05/2021

Fastening to U-shape concrete inlays with a nominal thickness t_{II} of 3 mm.

 $t_{II} = 3.0 \pm 0.3 \text{ mm}$

Grade: ≥ S320 GD according to EN 10346

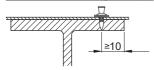

Sheet thicknesses and overlap types

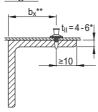

Edge distances (mm)

Rolled I or wide flange shapes

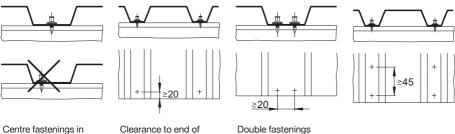

Angles

- * For t_{II} = 3 to 4 mm, restrictions on application. See approval or contact Hilti.
- ** Maximum recommended $b_x \le 8 \times t_{||}$ however, jobsite verification advisable.

Trapezoidal profiles

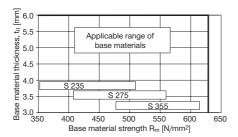

Centre fastenings in ribs

Clearance to end of sheet

Note: Reduce tensile resistance per fastener to 0.7 N_{Rk}.

Application limits

Corrosion information

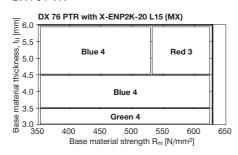

- The intended use only comprises fastenings which are not directly exposed to external weather conditions or moist atmospheres.
- For more details, please refer to following technical document: Hilti Corrosion Handbook
